

DoubleCHEK™

Two Key Checks. One Safe Placement.

Combining CO₂ & pH indicator checks into one single, simple-to-use device allows clinicians to place any size nasogastric tube, from any manufacturer, safely & quickly.

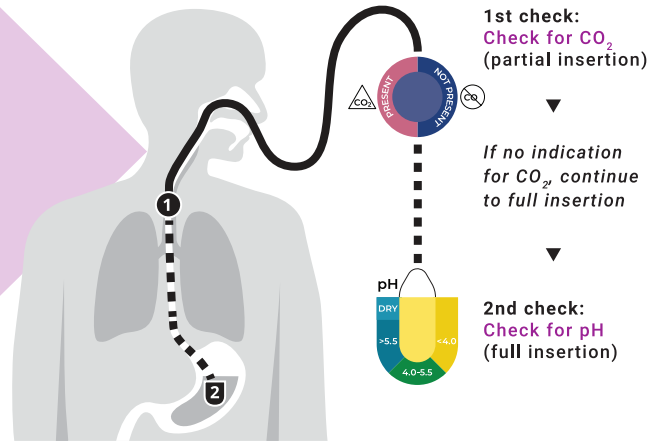

The Need

Misplacement and exposure to unnecessary radiation are dangerous, but unfortunately common problems associated with the insertion and confirmation of nasogastric feeding and decompression tubes.

The technologies that exist today are either; too costly, too big to be compatible with all tube sizes, have accuracy problems (discerning lung placement), or only provide limited information *after* the tube has been fully inserted.

Two Key Checks. One Safe Placement.

Aspirate moves through DoubleCHEK's patented valve and pump system, directing small volume samples to the CO₂ and pH indicator zones, while the remaining aspirate is delivered to the sealed collection tube.

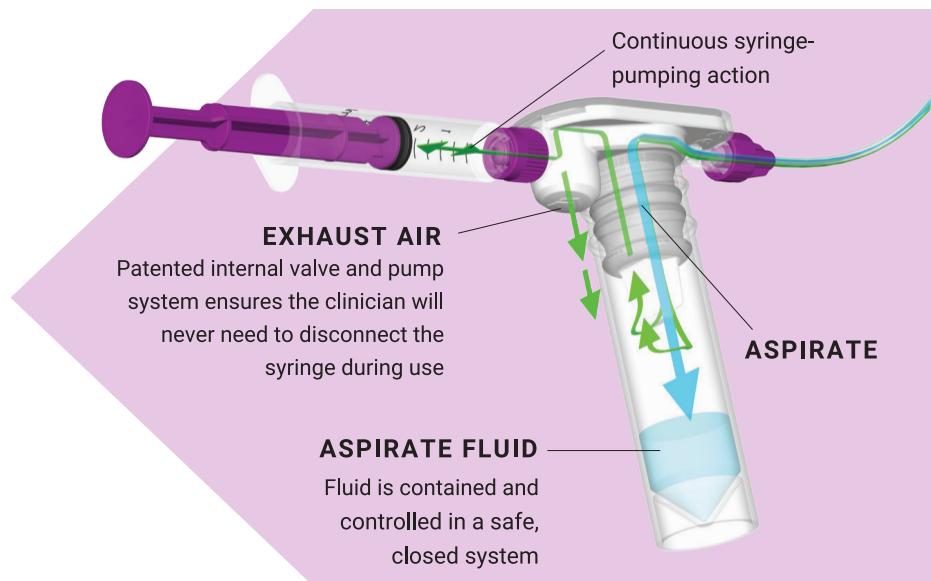

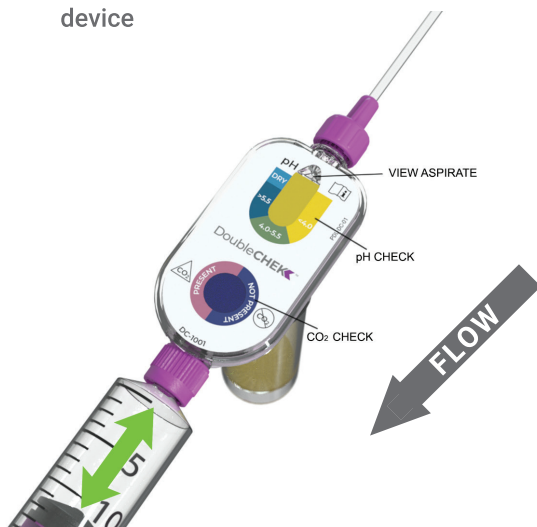

The DoubleCHEK™ Advantages

CONVENIENT EASE OF USE

- Easy-to-read pH & CO₂ indicators assist with tube placement
- Compatible with any size of tube
- Made for all ages/sizes of patients
- Use with existing equipment & supplies
- ENFit™ compatible connectors
- Low cost, single patient, 24hr. reusable device

HELPS PROMOTE BETTER OUTCOMES

- Reduce the incidence of lung misplacements
- Initiate enteral feeding earlier
- Reduce unnecessary exposure to radiation
- Reduce patient transport related complications
- Reduce length of stay in the ICU

DoubleCHEK™
Ordering Information:
 Order Number DC-1001
 Packaging: 10 per box
 NHSSC#: FAM28623

Additional Recommended Items:
 Medline Scientific Collection Tubes w/Label
 1200 per box
 Medline #: 309201FL NHSSC #: KBD3913
 Medline ENFit Filter/Milk Straws - 50 per box
 14cm Medline #: C014L, NHSSC #: FVK210
 20cm Medline #: C020L, NHSSC #: FMW2382

Distributor:
 Medline
